

ETC

Environmental Tank & Container

Legal Load Tanks

The Legal Load Tank is designed to minimize transportation costs. The new egg-shaped design allows the tank to fit on a trailer without any overhang. This eliminates the need for oversized load permits when transporting the tanks. In addition to decreased transportation costs, the Legal Load Tank has a smaller footprint than ETC's standard 400bbl API tank. Five Legal Load Tanks fit in the same footprint as four 400bbl API Tanks resulting in 150bbl more storage capacity.
